(54) PRODUCTION OF SUPERCONDUCTOR

(57)Abstract:

PURPOSE: To produce the superconductor having good stability by preventing the reaction of a superconductive complex metal oxide and a base body at the time of producing this oxide.

CONSTITUTION: This process for production of the superconductor consists (A) calcining an inorg. film which is formed on the base material and consists of (1) barium carbonate, (2) rare earth metal oxide, (3) copper oxide, and (4) noble metal and/or the oxide thereof, at the temp. at which the reaction between this film and the base material does not substantially arise in an inert gaseous atmosphere of 51vol.% oxygen concn. or under a reduced pressure of 50.01atmm (absolute pressure) oxygen partial pressure to bring the barium carbonate, the rare earth oxide and the copper oxide into reaction while removing carbon dioxide from the barium carbonated contained in this film, then (B) oxidizing the film by the molecular oxygen at the temp. at which the reaction of the resulted metal oxide film with the base material does not substantially arise, and (C) thereby forming the superconductor film constituted of the superconductive complex metal oxide consisting of the rare earth metal and the copper and the noble metal.

LEGAL STATUS

[Date of request for examination]

07.11.1991

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

1991879

[Date of registration]

22.11.1995

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
